

Digital Map Products Inks Deals with ZipRealty and CoStar Group ZipRealty and CoStar Group Add Parcel Detail to Online Applications

Santa Ana, CA – August 16, 2007 – Digital Map Products (<http://www.digitalmapproducts.com>) today announced that it has added ZipRealty and CoStar Group to its growing list of high-profile clients choosing ParcelStream™. Digital Map Products (DMP) debuted its ParcelStream™ web service late last year as part of Fidelity National Real Estate Solutions', a subsidiary of Fidelity National Information Services Inc, Cyberhomes web site (<http://www.cyberhomes.com>). Since then, there has been a tremendous response to the company's cost-effective solution for the acquisition and visualization of parcel boundaries.

"Street centerlines and aerial imagery just don't tell the whole story. The visualization of actual property boundaries is quickly becoming the standard for map-based web applications dealing with real property," said Jim Skurzynski, president and founder of DMP, a pioneer provider of visual data content and Internet-based business applications for real estate and government.

"With parcel-level content, you have much greater visual information on which to base your decisions. Additionally, when searching for properties based upon parcel accuracy you're placed directly over your target property, not at an extrapolated location along the street like in most web-based applications today. That's critical when you're a serious real estate professional trying to understand a property's true value, or a city planner performing zone change notifications."

"When it comes to collecting parcel content, there are currently very few options," said Jamie Wilson, vice president of product development for ZipRealty, the largest Internet based real estate brokerage. "We found ParcelStream™ to be the best solution out there and a more cost effective solution than building it in house."

"In addition to the quality and accuracy of the parcel content, we wanted a solution that could be deployed right away," said Bob Evatt, vice president of software development for CoStar Group, the country's number one provider of information services to the commercial real estate industry. "By choosing ParcelStream™, we were able to incorporate parcel visualization into our applications with minimal impact on development resources. DMP had us on-line in a matter of days, allowing our customers to quickly take advantage of the new features."

DMP has been building its databases since 1996, specializing in collecting parcel geometry on a county-by-county basis, navigating both the legal and the technical complexities presented by these public databases. "Our goal has always been to remove as many of the obstacles to this data as possible thus making the data more available and accessible by our customers," said Skurzynski.
