

LandVision is  
Southern California  
Edison's Single Source  
of Truth

Success Story  
Rosemead, California

GENERAL INDUSTRY

## ! PROBLEM

Southern California Edison needed a reliable GIS platform to streamline massive amounts of property data

## 💡 SOLUTION

LandVision helps Southern California Edison aggregate and analyze huge amounts of data

## ☰ FEATURES

- **Property Information:** Instant access to accurate ownership information and property boundaries
- **Import data:** Easy to import internal data for mapping and analysis
- **Customization:** Unlimited customer support to ensure data aligns with requirement

## LandVision Helps Energy Companies Access, Aggregate and Analyze Huge Amounts of Property Data

### Accurate Property Data for Streamlined Workflows

Southern California Edison (SCE) is the primary electricity supply company for much of Southern California. GIS Analyst H. Steve Eimer, uses LandVision within the geospatial analysis group for acquisitions, Right of Way, government lands and title.

*"LandVision has been our single source of truth (SSOT) since 2008. Other solicitors reached out, but they couldn't compete with LandVision. We had one of the biggest projects in the company's history at the time, but there was too much data floating around. We chose LandVision to narrow it down. It's been adding value and has been our SSOT since then."*

*"Verifying ownership and property boundaries is key for the problems we are solving. For example, LandVision allows us to quickly identify and then send mailing lists to landowners where we will be doing work. We can also easily export shapefiles and bring them into projects for base mapping."*

### Customization to Meet Specific Data Requirements

Digital Map Products customer-centric approach ensures the platform evolves alongside SCE's needs.

*"Customer support works closely with our group. We've made specific requests and they always work with us to make extracts available and data usable for GIS format. We've always been able to extract parcels, create buffers, import data, and extract shapefiles into our mapping and analysis."*

*"LandVision's flexibility allows the technology to work for our needs, making it a solid solution for us. Digital Map Products' willingness to work with us and address our needs has made a big difference for us as a company and the work we do."*
