

The California Department of Fish and Wildlife uses the DMP location intelligence platform for one-stop access to statewide property data.

Success Story

Sacramento, California

STATE & FEDERAL GOVERNMENT

PROBLEM

Finding current, accurate parcel boundaries and land ownership data was challenging, and it required time-consuming data requests to multiple sources.

SOLUTION

The DMP platform supplies complete, updated property information, minimizing the time and effort required to access information.

BENEFITS

- **Access Parcel Data Instantly:** With just one click, parcel boundaries, ownership information, and location data are instantly available in LandVision.
- **Eliminate Unnecessary Data Requests:** With complete, updated property information in a single application, team members don't need to request data from different counties.
- **Keep Your Existing Workflows:** The DMP platform is designed to work the way that you do and ready to adapt to your unique requirements.

The DMP Platform Supplies Instant Property Data to the California Department of Fish & Wildlife

Will Patterson works for The California Department of Fish and Wildlife (CDFW) in the Biogeographic Data branch. His team primarily uses LandVision™ and SmartParcels® for access to statewide parcel data, and the department is currently reviewing SpatialStream® as a means of integrating parcel data into web and mobile applications.

LandVision Provides Easy Access to Parcel Data

Patterson's team requires fast access to updated parcel boundaries and land ownership data. To address this requirement, CDFW often uses the LandVision mobile app to show a user's current location on the map, with context to parcels nearby that can be queried for ownership status.

"We've been using the DMP platform for 10 years," Patterson shares. "It has helped us tremendously with staff productivity and with parcel and land ownership-related decisions."

Find the Property Information You Need All in One Place

Using the DMP platform, CDFW is saving time and money because they no longer have to collect and maintain property data from multiple sources.

"With 58 counties in California, it is very difficult to acquire property data from each county and manage it ourselves," says Patterson. "Having DMP aggregate and normalize all of the information we need has been very impactful."

Adapt the DMP Platform to Meet Your Requirements

Patterson explains that CDFW chose the DMP platform because its capabilities and services are superior to other solutions they considered. His team also frequently takes advantage of the on-demand training videos and personalized webinars provided by DMP. Patterson particularly appreciates that he is able to license SmartParcels content in a way that meets the department's specific requirements.
