

Midstream oil & gas company Enterprise Products relies on LandVision™ to manage right-of-way projects, conduct due diligence, and track property records across the U.S.

OIL & GAS

## PROBLEM

Accessing property data in different regions required traveling to multiple county assessor offices and making numerous onsite visits, which was inefficient and expensive.

## SOLUTION

LandVision allows Enterprise Products to combine nationwide property information with the company's proprietary data for efficient remote property research.

## BENEFITS

- **Integrate Proprietary Data:** Analyze your company's data alongside DMP's property and location data to streamline workflows.
- **Access Complete Location Data in One Place:** Review current, accurate location information from anywhere in the country within a single application.
- **Collaborate with Project Teams Effectively:** Share data across project teams to ensure everyone has access to consistent location information.

## LandVision Helps Enterprise Products Track and Manage Land Acquisition Across the Country

Audra Lund is the Lead Land Analyst for midstream oil & gas company Enterprise Products. Lund's department is responsible for acquiring right of way to lay pipeline and handling due diligence and records for tracts of land acquired by the company.

### Pair DMP's Nationwide Property Data with Your Proprietary Data

Enterprise Products primarily uses LandVision to access complete parcel data. LandVision's extensibility also allows the company to import their own data to visualize where they've laid pipeline assets and placed valves and facilities. With LandVision, Lund's team also overlays plans for new pipeline assets, researches property owners, and generates ownership lists with the help of complete owner portfolios.

"Time is limited for us, and projects have to be done ASAP," Lund says. "LandVision enables us to quickly identify property ownership and details for various tasks."

### Use Centralized Location Data to Develop Efficient Workflows

Prior to using LandVision, Lund's team was doing research in courthouses or onsite to get the data they needed, which was time-consuming and inefficient. "The land department benefits by aggregating detailed research among multiple counties in one place. We no longer have to go county to county to get the information we need," according to Lund.

**"LandVision saves our department time and money, in terms of travel costs and courthouse fees, because onsite research has been reduced," Lund explains. "Everything can be done in-house, faster."**

### Share Data Across Project Teams Anytime, Anywhere

Enterprise Products does a significant amount of field work in remote locations. LandVision helps team members operating in different geographies effectively share data with each other.

"LandVision allows multiple departments to access and utilize the same data we're using in the land department," says Lund. "Some teams were hesitant at first, but now that everyone has seen what a strong application LandVision is, everyone is on board!"

Over 1,200 businesses and government entities trust the DMP platform to help them make more confident decisions.
